Q.Factorial

Making sense of your QMS and UKAS Accreditation

Our consultants have decades of experience and can smooth your journey past those pesky auditors and onwards to the land of continual improvement.

At QFactorial we don't just help you to get UKAS accredited, we also help you and your teams to make sense of the laboratory, testing and calibration standards. This includes finding the most practical ways of implementing the sometimes onerous requirements whilst still satisfying the UKAS assessors.

- Fact finding, diagnosis & planning
- Documents, tools & data
- Make it real – mentoring & training
- Validation & verification
- Internal audit & review
- UKAS application and assessment

COLLABORATE, INTEGRATE, CHALLENGE, IMPROVE!

It's a simple journey when you know what you're doing and you've been there many times before.

Where Quality meets Science, Technology & Sustainability

We cover a **wide range** of ISO and related standards

Q. Factorial

We have worked with a wide range of ISO standards, helping our clients to gain and retain UKAS accreditation for many types of testing and calibration activities. Our job is not just to help you develop and implement your QMS and become accredited for your current services, but also to establish a framework within which you can add new assays, tests or calibrations in future.

We are ourselves certified to ISO 9001, so we know what we are talking about!

bsi ISO 9001 Quality Management Systems CERTIFIED

FS 782414

Standard	Who/What's it for?
ISO 15189	**Medical laboratories, including point-of-care-testing (POCT).** Note: POCT was formerly under ISO 22870 (now withdrawn). ISO 15189 applies if you are involved in the sampling or examination of specimens of fluids or tissues derived from the human body for diagnosis, monitoring, management, prevention or treatment of disease, or assessment of human health.
ISO 17025	**Testing and calibration laboratories, including mobile/on-site testing and calibration services.** Whilst it can apply to any laboratory, ISO 17025 is mostly used in the non-medical context, i.e. for industrial testing and calibration, including related sampling operations.

Don't see your bugbear on this list? Please ask!

Please see our other flyers on ISO Certification and Sustainability for more standards specifically associated with these services.

If you are already UKAS accredited and looking to add further ISO credentials to satisfy stakeholders or strengthen competitiveness, we have specialists who can help you to implement ISO 14001 (environmental management) and ISO 27001 (information security) plus a host of related standards and schemes.
